

Contoso Corp Workplace Health and Safety Policy

Safety Responsibilities

Contoso Corp is committed to providing a workplace that is free from recognized hazards and that meets or exceeds applicable occupational health and safety standards in every jurisdiction where we operate, including Washington State, Texas, and Ireland. This policy applies to all employees, contractors, temporary staff, and visitors at Contoso Corp offices in Northlake, Austin, and Dublin, and it should be read alongside the Contoso Corp Employee Handbook, which describes general workplace conduct expectations, and the Contoso Corp Code of Conduct and Business Ethics Policy, which addresses how employees are expected to raise concerns in good faith.

Workplace safety at Contoso Corp is a shared responsibility between the company and every individual who works in or visits our facilities. The company retains ultimate accountability for maintaining safe premises, but that accountability is only effective when employees actively participate in identifying hazards, following procedures, and reporting concerns promptly rather than assuming someone else will notice.

The Environmental Health and Safety team, referred to throughout this policy as EHS, sits within the Facilities organization and is responsible for setting site-specific safety standards, conducting periodic hazard assessments, maintaining life-safety equipment such as fire suppression systems and automated external defibrillators, and serving as the primary point of contact for regulatory inspections. EHS maintains a dedicated mailbox, ehs@contoso-corp.example, staffed during business hours at each of the three offices.

Site Facilities Managers at each location are responsible for day-to-day implementation of this policy, including scheduling fire drills, coordinating with building landlords on shared life-safety systems, and ensuring that evacuation maps are posted and current. The Northlake Facilities Manager also serves as the company-wide EHS Program Lead and has authority to pause work in any area of any office where an imminent hazard is identified, pending correction.

People managers are responsible for ensuring that employees on their teams complete required safety training, including the annual workplace safety refresher and any role-specific training such as forklift certification for warehouse staff or laboratory safety training for hardware engineering staff who work in the Austin prototyping lab. Managers must not schedule work that requires bypassing a posted safety control, such as propping open a fire door for convenience.

Every employee is responsible for working within their training, using provided personal protective equipment where required, keeping walkways and emergency exits clear of boxes, cables, and furniture, and reporting hazards through the channels described in this policy rather than attempting unauthorized repairs. An employee who disables or circumvents a safety device, such as removing a machine guard or disabling a smoke detector because it is triggering false alarms, is subject to

disciplinary action under the Contoso Corp Code of Conduct and Business Ethics Policy regardless of intent.

Contoso Corp maintains a workstation ergonomics program administered jointly by EHS and the People Team. New employees are prompted to complete a self-assessment tool within their first two weeks, available at ergonomics.contoso-corp.example, which asks about monitor height, chair adjustment, keyboard and mouse placement, and any discomfort experienced during the workday. The tool generates a personalized set of adjustment recommendations and flags cases warranting a live consultation.

Employees who report persistent discomfort through the ergonomics self-assessment, or who request an ergonomic evaluation directly through their manager or EHS, are entitled to a workstation review within ten business days. Reasonable accommodations arising from an ergonomic evaluation, such as a sit-stand desk, an external keyboard, or a monitor arm, are approved by Facilities at no cost to the employee and do not require a formal accommodation request under separate disability accommodation procedures unless the underlying condition requires ongoing medical management.

Contractors and vendors performing work on Contoso Corp premises, such as electricians, HVAC technicians, or catering staff, must check in with front-of-house security or reception at each office and are escorted by a Facilities representative when their work requires access to mechanical rooms, server rooms, or other restricted areas. Contractors performing hazardous work, including anything involving ladders above six feet, electrical panels, or roof access, must submit a completed safety plan to EHS at least two business days in advance.

This policy is reviewed annually by EHS in partnership with the People Team and Legal, and more frequently if a regulatory change, audit finding, or significant incident warrants an update. Material changes are communicated to all employees through the company intranet and, where the change affects a specific site, through a briefing led by that site's Facilities Manager.

Housekeeping standards are part of everyday safety responsibility rather than a separate program: employees are expected to keep desks and shared spaces free of tripping hazards, store heavier items on lower shelving, close file cabinet and desk drawers fully after use, and report spills to Facilities immediately rather than leaving them for cleaning staff to discover. Kitchen and break room areas carry additional expectations, including prompt cleanup of spilled liquids near electrical outlets and immediate reporting of any appliance that sparks, overheats, or smells of burning.

Employees who work with company vehicles, including the shared Northlake shuttle van and Austin warehouse forklifts, must hold the appropriate valid license or internal certification before operating the equipment, and must complete a pre-use inspection checklist provided by Facilities. Any employee who is asked to operate equipment they are not certified on should decline and notify their manager rather than proceeding out of a desire to be helpful.

Remote and hybrid employees working from a home office are expected to apply the same general safety judgment to their home workspace as they would at a Contoso Corp office, including keeping walkways clear and cords managed, and may use the ergonomics self-assessment tool described above to request equipment such as an external monitor or ergonomic chair for home use, subject to

the same review and approval process as an office-based request.

EHS periodically conducts unannounced walkthroughs of each office to identify hazards such as blocked exits, overloaded power strips, or expired fire extinguisher inspection tags, and shares a summary of findings with the site Facilities Manager and the relevant department heads. Departments are expected to correct identified issues within the timeframe EHS specifies, and repeated failure to correct a flagged hazard is escalated to the Facilities Manager's leadership.

Incident Reporting

Prompt and accurate reporting of workplace injuries, illnesses, and near misses allows Contoso Corp to correct hazards before they cause repeat harm, and it is required to satisfy recordkeeping obligations under OSHA in the United States and equivalent workplace injury reporting requirements administered by the Health and Safety Authority in Ireland. This section describes what must be reported, how, and within what timeframe.

Any employee who is injured or becomes ill in connection with work, no matter how minor the injury seems, must notify their manager and EHS as soon as it is safe to do so, and in any case within twenty-four hours. For injuries requiring immediate medical attention, employees or a coworker should first call emergency services following the protocol described in the Emergency Procedures section of this policy, and report to EHS afterward once the situation is stable.

EHS uses a standard Workplace Incident Report form, available on the intranet and from every Facilities Manager, to capture the date, time, and location of the incident, a description of what happened, any equipment involved, witnesses present, and the immediate corrective action taken. The injured employee's manager is responsible for ensuring the form is submitted within forty-eight hours of the incident, even if the employee is unable to complete it themselves, in which case the manager or a witness completes it on the employee's behalf.

For any incident that results in days away from work, restricted duty, medical treatment beyond basic first aid, loss of consciousness, or a significant injury or illness as defined by OSHA recordkeeping rules, EHS logs the case on the OSHA 300 log for the relevant establishment within seven calendar days of receiving notice, and prepares the corresponding OSHA 301 incident report. EHS retains these records for at least five years and posts the OSHA 300A annual summary each February in the location required by regulation.

Employees who are injured on the job and require time away from work or medical treatment are supported through the workers' compensation process. EHS or the People Team will provide the employee with the appropriate workers' compensation claim forms within one business day of the reported incident, help coordinate an appointment with an approved treating physician where required by state law, and serve as the point of contact with the workers' compensation insurance carrier throughout the claim. Employees should direct questions about wage replacement, medical bill coverage, or claim status to People Team Benefits rather than to their manager.

Contoso Corp strongly encourages near-miss reporting, meaning any event that did not result in injury or damage but could have under slightly different circumstances, such as a shelf that nearly

toppled, a spill that was cleaned up before anyone slipped, or a door that failed to latch properly. Near-miss reports may be submitted anonymously through the EHS intranet form and are reviewed without attributing blame to the reporting employee; the purpose is exclusively to identify and correct hazards before they cause harm.

Managers and EHS must not discourage, delay, or retaliate against an employee for reporting an injury, illness, or near miss, including through informal pressure to under-report in order to preserve a team's safety record. Any employee who believes they have experienced retaliation for a safety report should contact People Team Employee Relations or use the confidential Contoso Corp Ethics and Compliance Hotline described in the Contoso Corp Code of Conduct and Business Ethics Policy.

EHS conducts a root-cause review for any recordable injury and for any near miss involving equipment, electrical systems, or a fall from height. The review produces a written summary of contributing factors and corrective actions, which is shared with the affected team's manager and, where the finding is broadly applicable, communicated to all offices to prevent recurrence elsewhere.

Damage to company property, such as a forklift collision in the Austin warehouse or water damage from a failed pipe, is reported to Facilities using the same Workplace Incident Report form, even when no one is injured, because these events often reveal maintenance issues that could later cause harm. Facilities tracks property damage incidents separately from personal injury cases but reviews both during quarterly safety committee meetings.

Each office maintains a joint labor-management safety committee composed of EHS, the site Facilities Manager, and volunteer employee representatives from different departments, who meet quarterly to review incident trends, near-miss reports, and outstanding corrective actions, and to solicit feedback directly from employees on safety concerns that may not have been formally reported.

Employees who experience a work-related injury or illness that requires ongoing medical treatment, or that may qualify for leave under applicable state or federal law, should also contact People Team Benefits to understand how a workers' compensation claim interacts with other leave programs described in the Contoso Corp Employee Handbook, since the two processes run in parallel but are administered separately and have different documentation requirements.

EHS reviews aggregated incident and near-miss data quarterly at the company level, in addition to the site-level safety committee reviews, to identify trends that span multiple offices, such as a recurring issue with a particular piece of shared equipment or a seasonal increase in slip-and-fall reports during icy weather in Northlake. Findings from this review inform updates to training content and, where warranted, to this policy itself.

Reporting obligations under this policy extend to incidents involving contractors and visitors as well as employees. A Facilities representative or the escorting employee must notify EHS of any injury to a contractor or visitor on Contoso Corp premises using the same Workplace Incident Report form, since the company may retain some recordkeeping or notification obligations even when the injured individual is not a Contoso Corp employee.

Emergency Procedures

Contoso Corp maintains site-specific emergency response plans for each office, covering fire, medical emergencies, severe weather, and other events that require rapid evacuation or shelter-in-place. These plans are posted on every floor near elevator lobbies and stairwells, are reviewed with new employees during site-specific onboarding, and are tested through drills described below. Employees who are unsure of the procedure for their location should ask their office's Facilities Manager or consult the intranet emergency procedures page for their site.

Fire Evacuation

Each Contoso Corp office has designated evacuation routes and assembly points that are posted on evacuation maps near stairwells and printed in the new-hire safety packet. In Northlake, the primary evacuation route from the four-story headquarters building uses the north and south stairwells, and the assembly point is the parking lot section adjacent to the flagpole across from the main entrance on Lakeview Drive; a secondary assembly point at the transit center a block south is used if the primary lot is inaccessible.

In Austin, employees evacuate via the east stairwell serving the open-plan engineering floors and the west stairwell serving the lab and warehouse space, assembling in the shared plaza between the Contoso Corp building and the adjacent parking garage. Employees working in the Austin prototyping lab must exit through the lab's dedicated emergency door rather than re-entering the main office floor, since that route is faster and avoids congestion at the main stairwell during a drill or real event.

The Dublin office occupies two floors of a shared commercial building, and evacuation there follows the building's overall fire safety plan in coordination with the landlord; Contoso Corp employees use the stairwell nearest the reception area and assemble at the designated point in the courtyard shared with other tenants, identified by a green assembly point sign. Dublin floor wardens coordinate directly with the building's fire safety officer during any activation.

Each floor at every office has one or more trained floor wardens, identified by high-visibility vests stored near their desks, who are responsible for sweeping their assigned area during an evacuation, directing coworkers to the nearest usable exit, assisting employees who need help evacuating, such as those with mobility limitations, and confirming with the assembly point coordinator that their area is clear. Floor wardens are recruited by the site Facilities Manager, trained annually, and listed on the posted evacuation map for their floor.

Fire drills are conducted at least twice per year at each office, at times coordinated with building management where applicable, and are unannounced in at least one of the two annual drills so that response can be assessed under realistic conditions. EHS records drill completion times and any issues observed, such as a blocked exit or a stairwell door that failed to latch, and tracks corrective actions to closure.

During any fire alarm activation, whether drill or real, employees must stop what they are doing, save work if it takes only a few seconds, and proceed calmly to the nearest exit; employees must never use elevators during a fire evacuation and must never re-enter the building until the site Facilities

Manager or the responding fire department gives an all-clear. An employee who discovers a fire or smells smoke should pull the nearest fire alarm pull station, if not already sounding, and call emergency services before attempting any evacuation of others.

Employees with a disability or temporary condition that may affect their ability to evacuate quickly, such as a broken leg or a visual impairment, are encouraged to identify themselves confidentially to their floor warden or to EHS so that a personalized evacuation plan can be developed in advance, which may include a designated evacuation buddy or a plan to shelter at a rated area of refuge near a stairwell pending assistance from responding firefighters.

Each office keeps a small supply of emergency evacuation chairs near stairwells on upper floors, intended to assist an employee who cannot use the stairs unaided during an evacuation; floor wardens receive brief training on their use, and Facilities inspects the chairs annually to confirm they remain in working order.

Medical Emergencies

Automated external defibrillators are installed at each Contoso Corp office and are marked with green-and-white AED signage; in Northlake, units are located near the main reception desk and on the third-floor break room wall, in Austin near the front lobby and inside the warehouse office, and in Dublin at the reception area on each of the two floors the company occupies. AEDs are inspected monthly by Facilities to confirm battery status and pad expiration, with results logged and retained by EHS.

Each office maintains a roster of employees who hold current first-aid and CPR certification, coordinated by EHS, and aims to keep at least two certified employees present on each floor during core business hours. Employees interested in becoming certified may request enrollment in a Contoso Corp-sponsored first-aid and CPR course, offered on-site several times per year at no cost, through the intranet training catalog.

In the event of a medical emergency, any employee who witnesses a coworker collapse, exhibit signs of a heart attack or stroke, experience a severe allergic reaction, or sustain a serious injury should immediately call emergency services, meaning 911 in Northlake and Austin or 112 in Dublin, and then notify reception or a floor warden so that responders can be met and guided to the correct location. Employees should not move an injured person unless leaving them in place creates further danger, such as proximity to fire or falling objects.

While waiting for emergency responders, a certified first-aid employee, if available, should attend to the person and, if trained and the situation warrants it, retrieve and use the nearest AED, which is designed to guide a lay user through its use with voice prompts. Reception staff at each office are trained to direct paramedics from the building entrance to the location of the emergency by the fastest available route.

Following any medical emergency requiring an ambulance response, the involved employee's manager must ensure a Workplace Incident Report is filed with EHS within twenty-four hours, consistent with the Incident Reporting section of this policy, regardless of whether the underlying

condition was work-related, so that EHS can evaluate whether facility factors contributed and whether the AED and first-aid response performed as intended.

Employees with a known medical condition that could result in a workplace emergency, such as a severe allergy, epilepsy, or diabetes requiring glucose management, are encouraged, though never required, to share relevant information confidentially with EHS or People Team so that appropriate accommodations can be made and, with the employee's consent, so that nearby coworkers can be briefed on how to help. Any information shared this way is kept confidential and used solely for emergency preparedness.

Each office maintains a stocked first-aid kit in a clearly marked location, restocked monthly by Facilities, containing supplies suitable for minor cuts, burns, and sprains. First-aid kits are not a substitute for professional medical evaluation, and an employee who uses the kit for anything beyond a minor injury should still be encouraged to seek follow-up care and should still have the incident logged with EHS.

In the case of a widespread medical event affecting multiple employees at once, such as a suspected gas leak, carbon monoxide exposure, or foodborne illness following a catered event, the site Facilities Manager coordinates with EHS to determine whether the affected area should be evacuated in addition to summoning emergency services, and notifies the company-wide EHS Program Lead so that other offices can be alerted if the cause may be systemic, such as a shared food vendor.

Workplace Violence Prevention

Contoso Corp does not tolerate violence, threats of violence, or intimidating behavior in any workplace, worksite, company-sponsored event, or work-related communication, whether the individuals involved are employees, contractors, visitors, or members of the public. This policy applies in addition to, and does not limit, the protections described in the Contoso Corp Equal Employment Opportunity and Anti-Harassment Policy, which addresses harassment and discrimination more broadly.

For purposes of this policy, workplace violence includes physical assault or attempted assault, verbal threats or threatening gestures, intimidation intended to instill fear, stalking, and the intentional destruction of property used to threaten a coworker. It also includes behavior that occurs outside company premises or outside working hours, such as a threatening message sent to a coworker's personal phone, if that behavior affects the safety of the workplace or another employee's ability to do their job.

Employees must never bring weapons of any kind onto Contoso Corp premises, into company vehicles, or to company-sponsored events, regardless of whether the employee holds a valid permit to carry the weapon elsewhere. This prohibition applies to firearms, knives with blades longer than three inches other than tools required for a specific job function, and any other item carried with the intent to threaten or harm. Limited exceptions apply to licensed security personnel engaged by Contoso Corp and to law enforcement officers acting in an official capacity.

Contoso Corp recognizes that domestic violence, dating violence, sexual assault, and stalking occurring outside the workplace can create real safety risks inside the workplace, for example when an abusive partner attempts to contact or approach an employee at the office. Employees experiencing this kind of situation are strongly encouraged to notify EHS or People Team confidentially so that the company can take reasonable protective steps, which may include adjusting the employee's work location, alerting front-of-house security with a photo of the individual of concern, or coordinating with law enforcement on a protective order.

Contoso Corp maintains a cross-functional Threat Assessment Team, composed of representatives from People Team Employee Relations, Legal, EHS, and Security, that evaluates reports involving a specific threat or concerning behavior, such as a former employee making repeated hostile contact or a current employee making statements that suggest an intent to harm a coworker. The Threat Assessment Team has authority to recommend immediate protective measures, including suspension pending investigation, a no-contact directive, revocation of building access, or involvement of law enforcement, and its findings are documented and retained by Legal.

Employees who witness or become aware of an act or credible threat of workplace violence must report it immediately to their manager, People Team, EHS, or, where there is imminent danger, directly to emergency services before making an internal report. Reports may also be made confidentially through the Contoso Corp Ethics and Compliance Hotline referenced in the Contoso Corp Code of Conduct and Business Ethics Policy. No employee will face retaliation for reporting a genuine safety concern in good faith, even if an investigation does not substantiate the report.

In the event of an active threat on Contoso Corp premises, such as an armed individual inside the building, employees should follow the run, hide, fight framework taught during annual active-threat awareness training: leave the area immediately by the safest route if possible, silence phones and hide in a securable location with the door locked or barricaded if evacuation is not safe, and, only as an absolute last resort when directly confronted, act to disrupt or incapacitate the attacker. Employees should call emergency services as soon as it is safe to do so and follow the instructions of arriving law enforcement without hesitation, including raising empty hands when instructed.

Building access security supports this policy directly: all employees, contractors, and visitors must badge in or sign in at reception, visitors must be escorted by their host beyond the lobby at every office, and tailgating through a badge-controlled door is prohibited even for familiar coworkers. Any employee who observes an unfamiliar individual inside a restricted area without a visible badge or escort should notify reception or Security immediately rather than confronting the individual directly.

Terminations, layoffs, and other high-risk personnel actions are coordinated in advance among the manager, People Team, and, where the situation presents any elevated risk, the Threat Assessment Team, so that building access can be revoked promptly, personal belongings can be arranged for safe retrieval, and, where warranted, additional security presence can be arranged for the day of the action.

Managers who become aware of behavior that may signal an elevated risk of violence, including a marked change in an employee's demeanor, direct or indirect threats, fixation on a coworker, or statements expressing hopelessness combined with access to weapons, must escalate to People

Team and EHS immediately rather than attempting to manage the situation informally or waiting to see if it resolves on its own. Early escalation allows the Threat Assessment Team to intervene before a concerning situation develops into an actual incident.

All employees complete an annual workplace violence prevention training module covering the definitions, reporting channels, and active-threat response guidance described in this policy, and new hires complete an initial version of the training within their first thirty days. Managers additionally complete supplemental training on recognizing early warning signs and on the escalation process, since managers are frequently the first point of contact when a coworker raises a concern.

Contoso Corp does not require an employee to confront, restrain, or otherwise personally intervene against another individual who is behaving violently or threateningly; the expectation in every case is to prioritize personal safety, remove oneself and others from danger where possible, and rely on trained responders, including law enforcement and the Threat Assessment Team, to manage the situation. An employee's decision to retreat rather than intervene is never treated as a failure to act.

Following any substantiated incident of workplace violence, the Threat Assessment Team conducts a post-incident review to identify whether earlier warning signs were missed, whether the response followed this policy, and whether any change to physical security, reporting channels, or training is warranted. A summary of lessons learned, with identifying details removed, is shared with the safety committees described in the Incident Reporting section so that improvements benefit every office.
